FOREWORD

This manual is part of the aids that the Technical Publications sector makes available to workshop technicians to allow the correct part of the confidence and/or repair operations and it is also a good way to familiarise with the IVECO product.

The entries acquired over many years in servicing and in editing technical publications has led us to devote a special volume of the electric system fitted on the models in question, considering the particularity and complexity of the subject.

This manual is intended for people with professional preparation in the "Vehicle Electrician" sector and at the same time avail of adequate and indispensable testing and/or measurement equipment for the main electrical ratings.

In drafting the texts and representing the graphics we have taken account of the particular necessities of the operator technician in some cases stating references or repeating certain diagrams in different places that may be obvious to a design engineer.

The completeness of the information given in the wiring diagrams, the size chosen and the ease with which they can be taken allow the repair operator to avail of all the information exactly where it is needed most, namely, on board the actual vehicle.
